COVID-19: overview of the OSCE participating States’ responses

Social distancing measures

GLOBAL WEEKLY TRENDS

Emergency measures have also been targeting public and private activities. The provision of public services has been limited to essential services in 20 pS (35%), often redirecting citizens to online platforms. Public transportation has also experienced restrictions, both in terms of frequency and passenger capacity, in 19 pS (33%).

Likewise, telecommuting has been widely promoted across the region. Finally, mass events have been prohibited in 40 pS (70%).

b. Shutdown of public services and private business

Emergency measures have also been targeting public and private activities. The provision of public services has been limited to essential services in 20 pS (35%), often redirecting citizens to online platforms. Public transportation has also experienced restrictions, both in terms of frequency and passenger capacity, in 19 pS (33%).

Likewise, telecommuting has been widely promoted across the region. Finally, mass events have been prohibited in 40 pS (70%).

c. Electronic monitoring measures

20 pS (35%) are currently using electronic monitoring tools to track the infection curve. This represents a 14% increase (8 pS) compared to last week. In addition to movement tracking technology through anonymized data and mobile applications, 4 pS (7%) are utilizing video surveillance tools for the same purpose.
